

Announcements and News from Miss Trenkamp

This coming week, the students will be wrapping up the year with different activities! The students will continue to practice identifying key skills with short nonfiction passages in reading. In math, the students will combine everything they have learned the past two weeks by collecting their own data and identifying different parts of the data for one project. The students will be working on this in class and will only need to work on it for homework if they are not completed by Thursday afternoon. In science, the students will end the year with some STEM challenges. In social studies, the students will be practicing identifying important information from historical accounts. In religion, the students will review the Ascension and Pentecost. Some of the students will also help lead a living rosary for the school with some of the seventh and eighth graders as well. This will be at 9:30 am in the Church.

The students collectively have been working really hard to make this their best quarter of the year. I am encouraging them to finish strong and power through! The last day I can accept any assignments for this final quarter is May 26th.

With the end of the year slowly approaching, I will be starting the process of checking for missing books from the classroom library. If you could have your student check for any books they borrowed from the classroom library and return them that would be great! If I have a list once I am done checking books, I will email that out.

The students are beginning to feel the summer itch. I am working with them to continue putting forth their best effort and following all classroom expectations until the last day we are together.

Blessings,

Jordan Trenkamp

What did we do last week?

This week, the students took time to play each other's board games they made for their book reports and worked on identifying key details in nonfiction texts. In math, the students learned how to make and read different types of graphs used with data. They also practiced making graphs with their Skittles data. In science, the students created a presentation to teach the class about an Earth Science topic with an assigned partner. In social studies, the students completed a mini-unit on the Feudal System of Medieval Europe. In religion, the students identified parallels between roles of key figures in the Old Testament and Jesus.

The Week Ahead
